The application has been amended from the claims submitted 05/06/2008 as follows:

1. (Currently Amended) An ultrasonographic apparatus, comprising:
 - an ultrasonic probe for transmitting/receiving an ultrasonic wave to/from a patient;
 - means for generating an ultrasonic transmission signal and transmitting it to the ultrasonic probe;
 - means for performing reception processing on a reflection echo signal received by the ultrasonic probe;
 - means for re-constructing a form image according to the reception signal processed by the reception processing means;
 - means for re-constructing an elasticity image according to the reception signal processed by the reception processing means;
 - means for displaying the form image and the elasticity image; ~~and~~
 - means for switching between the form image mode and the elasticity image mode; and

Art Unit: 3737

wherein the reception processing means includes first reception processing means for the form image and second reception processing means for the elasticity image; and

means for control between the first processing means and the second processing means;

~~wherein the reception processing means includes first reception processing means for the form image and second reception processing means for the elasticity image, and~~

wherein the control means switches between the first reception processing means and the second reception processing means according to selection of the form image and ~~or~~ the elasticity image.

13. (Currently Amended) A method for measuring an elasticity of a biological tissue, comprising the steps of:

generating an ultrasonic transmission signal and transmitting it to an ultrasonic probe;

performing a step of reception processing on a reflection echo signal received by the ultrasonic probe by selectively controlling switching between a first reception mode and a second reception mode;

re-constructing ~~at least one of~~ a form image and an elasticity image based on the reception signal having undergone the reception processing;

displaying at least one of the form image and the elasticity image; and

switching between a form image mode and an elasticity image mode;

wherein the reception processing step switches between and performs first reception processing for the form image and second reception processing for the elasticity image according to the selection of the form image ~~or~~ and the elasticity image.
